Your Recovery

- ✓ Following the procedure you will have no pain
- ✓ Immediately after the procedure, you are advised to do 20-30 minutes of aerobic exercise to facilitate the removal of the newly released fat cells
- ✓ You may return to work immediately
- ✓ After repeated sessions of Laser Lipo a noticeable improved body shape will emerge

Laser Lipo Procedure

The procedure consists of the use of multiple laser diodes attached to the outer skin. These diodes transfer laser energy through the skin to the fat cells.

This allows for the release of fat from the cells to be processed out of the body through the body's own lymphatic system.

You are then advised to do 20-30 minutes of aerobic exercise to facilitate the removal of the newly released fat cells.

No anesthesia is used and you are awake during the entire procedure. Also, your shape will continue to improve with repeated sessions. Simple!
