

LIPOSUCTION

Dr. Hicks uses Ultrasonic technology for this minimally invasive body contouring procedure.

Key Benefits of Liposuction:

- ✓ Produce noticeable results in a single procedure
- ✓ No general anesthesia: You will be completely awake during the entire procedure
- ✓ Removes unwanted excess fat to improve body appearance
- ✓ Minimal pain and recovery

Your Recovery

- ✔ Following the procedure you will likely have minimal pain, swelling and bruising.
- ✔ A compression garment is applied to keep pressure on the area in order to maintain shape.
- ✔ You may return to work within a few days.
- ✔ Your new body shape will continue to improve during the next few weeks, and will be more visible 6 to 8 weeks after surgery.

Liposuction Procedure

The procedure consists of infusing the body area/region with a sterile medicated solution.

This allows for easy access in order to soften the unwanted fat cells using Ultrasonic technique.

Then, a suction device is used to gently remove the fat and provide body contouring.

No general anesthesia is used and you are awake during the procedure. Simple!
